

Cutlery Tray Guide

Step 1) Measure the width of the drawer front

A 400mm wide drawer front suits a 400mm cutlery tray, a 500mm wide drawer front suits a 500mm cutlery tray etc.

Step 2) Identify the drawer type

Cutlery trays are supplied to suit either a soft-shut or standard drawer box. This can be identified by simply pushing your drawer shut and identifying the close: soft-shut will slow down the final shut of the drawer; standard drawers may bounce open if enough force is applied.

Please note soft-shut drawers will have grey metal sides whereas standard drawers will have white metal sides.

800/900/1000mm drawers will always be soft close
